Nanotechnology –
Fundamentals and Applications
of Functional Nanostructures

Results of the second research programme
Kompetenznetz “Funktionelle Nanostrukturen”
(Competence Network on Functional Nanostructures)

Prof. Dr. Thomas Schimmel
Prof. Dr. Hilbert v. Löhneysen
Dr. Matthias Barczewski

Kompetenznetz Funktionelle Nanostrukturen

# Table of Contents

Preface ............................................................... 1  
Preface of the Spokespersons of the Research Network ........ 3  
Introduction .......................................................... 5  

## Part A: Nanodevices .............................................. 9  
Nanodevices ........................................................ 11  
ZnO Nanorods: growth, properties and devices ................. 15  
Localized ATP synthesis to control a biological nanomotor .... 47  
Electron transport through metallic and organic wires ........ 65  
Molecular engineering of carbon nanotube transistors .......... 85  
Spatial dependence of the transport through proximity systems ... 111  
Coherent and Correlated Electron Transport in Multi-lead Quantum Dot Systems ........................................... 129  
Crossed Andreev Reflection in Superconductor-Ferromagnet Hybrid Structures .............................................. 147  
Coupling quantum light emitters to metal and dielectric nano-photonic structures ........................................... 161

## Part B: Functional Nanostructured Surfaces .................. 181  
Functional Nanostructured Surfaces ............................... 183  
Nanofunctionalized surfaces through molecular self-organization . 187  
Periodic Nanostructures: Preparation, Properties and Effects of Irradiation .................................................... 211  
Template-induced Preparation on Semiconductor Surfaces Driven by Phase Separation ........................................... 233  
Nanotribology and Nanotribochemistry of Model Systems: Investigation of Material- and Velocity-Dependent Mechanisms by AFM .................................................... 261  
Electrocatalytic Function of Nanostructured Surfaces – Reaction and Mass Transport ........................................... 281
Functional Nanopatterned Surfaces for Cell Adhesion Studies ........ 305
Electrocatalytic reactivity of bimetallic nanostructures and
nanostructured surfaces ................................................................... 333

Part C: Nanoparticles and Nanomaterials ......................... 355
Nanoparticles and Nanomaterials .............................................. 357
Magnetic anisotropies induced by large substrate strains .......... 361
Plant viral nanoscale biotemplates:
From virowires to dumbbells and arrays .................................... 385
Magnetic Nanomaterials: Self-aggregation and functionality ...... 411
Spinelectronics based on magnetic oxidic semiconductors ........ 441
Targeted lipid-coated nanoparticles ......................................... 467
Porous Metals as Functional Nanomaterials:
Surface Stress-Charge Response ............................................. 479
Index ...................................................................................... 491
